Non-flammable material. Overexposure may cause dizziness and loss of concentration. At higher levels, CNS depression and cardiac arrhythmia may result from exposure. Vapours displace air and can cause asphyxiation in confined spaces. At higher temperatures, (>250°C), decomposition products may include hydrofluoric acid (HF) and carbonyl halides such as phosgene. Rapid evaporation of the liquid may cause frostbite.

2.4. Unknown acute toxicity (GHS US)

SECTION 4: First-aid measures	
4.1. Description of first aid measures	
First-aid measures general	: Never give anything by mouth to an unconscious person. If you feel unwell, seek medical advice (show the label where possible).
First-aid measures after inhalation	: Allow victim to breathe fresh air. Allow the victim to rest.
First-aid measures after skin contact	: Remove affected clothing and wash all exposed skin area with mild soap and water, followed by warm water rinse.
First-aid measures after eye contact	: Rinse immediately with plenty of water. Obtain medical attention if pain, blinking or redness persist.
First-aid measures after ingestion	: Rinse mouth. Do NOT induce vomiting. Obtain emergency medical attention.
	Notes to physician: Because of the possible disturbances of cardiac rhythm, catecholamine drugs such as epinephrine should be used with special caution and only insituations of emergency life support. Treatment of overexposure should be directed at the control of symptoms and the clinical conditions.
4.2. Most important symptoms and effect	ts (acute and delayed)
Symptoms/injuries	: Not expected to present a significant hazard under anticipated conditions of normal use.
4.3. Immediate medical attention and sp	ecial treatment, if necessary
No additional information available	
SECTION 5: Fire-fighting measures	
5.1. Suitable (and unsuitable) extinguish	ing media
Suitable extinguishing media	: Foam. Dry powder. Carbon dioxide. Water spray. Sand. Use agent that is most appropriate for type of surrounding fire.
Unsuitable extinguishing media	: Do not use a heavy water stream.
5.2. Specific hazards arising from the ch	nemical
substance is not flammable in air at temperature concentrations of air at elevated pressure and/or	erature relief devices but may still rupture under fire conditions. Decomposition may occur. This s up to 100°C (212°F) at atmospheric pressure. However, mixtures of this substance with high temperature can become combustible in the presence of an ignition source.
5.3. Special protective equipment and pr	
Firefighting instructions	: Use water spray or fog for cooling exposed containers. Exercise caution when fighting any chemical fire. Prevent fire-fighting water from entering environment.
Protection during firefighting	: Do not enter fire area without proper protective equipment, including self-contained breathing
	apparatus.
